VISTR GAMES · A GUIDE FOR PARENTS, TEACHERS AND CARERS

Spot What's Missing

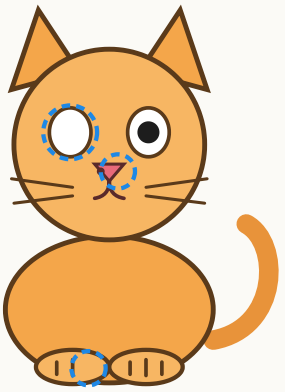

A calm picture game that builds attention, careful looking and words - at your child's own pace.

The complete picture

The copy: 3 things are missing

Found: pupil, nostril, toe

What the game is

Two copies of the same picture appear side by side. The copy on the right has a few things taken away - an eye without its pupil, a nose with one nostril, a paw with four toes. Your child finds each missing thing by pointing at it with a finger, the mouse or a switch. When they find one, it comes back, its name appears and is said out loud, and they earn a star.

The game was designed for children and adults with intellectual disabilities and learning differences, who learn best with clear pictures, spoken words and lots of encouragement. Anyone can play it.

What it helps with

- **Paying attention** to one picture at a time.
- **Comparing carefully** - noticing what is the same and what is different.
- **Words for things** - eye, pupil, nose, ear, tail, wheel, door - heard and seen together.
- **Hand and eye working together** when pointing or tapping.
- **Patience and confidence** - there is no way to "lose".
- **Following simple instructions**, said and shown.

> The game supports learning; it is not a diagnosis or a treatment. Share the progress report with your child's teacher, therapist or doctor - they can tell you how it fits their plan.

How a round works

1. The two pictures appear and a voice says what to do: *"Find 3 things missing from the cat."*
2. Your child moves over the right-hand picture. A soft ring shows where they are pointing.
3. They tap or click. If something is missing there, it comes back, its name is shown and said (*"Pupil!"*) and a star is added.
4. If nothing is missing there, the picture gives a gentle wiggle. Nothing is taken away - they simply try again.
5. If they get stuck, the missing place begins to glow softly, then more clearly. Hints never cost stars.
6. When everything is found - or when they press **Next** - a short celebration plays and a new picture comes. Pressing Next is always fine: the missing things are shown with their names first, so the picture still teaches.

Settings you control

All settings are in the carers' area on memoryq.com (your Memoryq sign-in). The game screen has no settings, so children never change them by accident.

Setting	What it does	Start with
Level (1 to 5)	How many things are missing and how small they are.	Level 1 or 2
Session length	3 to 20 minutes, or a number of pictures. A session always finishes at the end of a picture, with a friendly goodbye.	5 minutes
Voice	Instructions and names spoken in English or Kiswahili; voice on or off.	On
Hints	How soon the glow appears, or no hints.	On
Timer	A gentle countdown for older or more confident players (levels 4-5 only).	Off
Typing	For players who read: type the name ("nose") instead of pointing.	Off
Picture types	Animals, faces, home things, vehicles, food.	Animals

Choosing a level

Choose by what your child can do today, not by their age. The game watches how it goes and, after a few sessions, suggests moving up or down - you decide. Nothing changes on its own.

Level	Things missing	Size of the things	How close a tap must be	Pictures per session
1 First steps	1	Big: a whole ear, the tail	Very forgiving	3
2 Looking	1-2	Big	Forgiving	4
3 Finding	2-3	Medium: nose, paw	Medium	5
4 Detail	3-4	Small: pupil, nostril	Fairly exact	6
5 Sharp eyes	4-6	Small, some side by side	Exact	8

Playing together: tips

- **Sit beside them** for the first sessions. Point at the full picture first: "Look - the cat has two eyes. Does this cat?"
- **Name things** as they find them, and use the words later in the day ("Where is your nose?").
- **Short and often** works better than long: 5 minutes most days beats 30 minutes once a week.
- **Stop on a good moment.** If your child gets tired or upset, press the home button - progress is kept.
- **Choose a quiet time** and a comfortable seat; use headphones in a noisy room.
- **Celebrate effort,** not just stars: "You looked so carefully!"

> **Many ways to point:** touch screen, mouse, keyboard arrows plus Enter, or a single accessibility switch that moves a highlight around the picture. Ask a therapist which suits your child best.

Reading the progress page

After each session you see a short summary; over weeks you see how things change. Look for **trends**, not single days.

You will see	What it can tell you
Things found, with and without hints	Fewer hints over time usually means growing confidence.
Time to find each thing	Getting quicker often means looking is becoming easier.
Hardest kinds of things	For example small parts, or "one of two eyes". Good things to practise in daily life.
Level history and suggestions	When the game thinks a level is too easy or too hard.

You can print a one-page report to take to school or therapy.

Safety and privacy

- Children never make their own account and never type personal details. A player is just a first name or nickname and a picture, kept under your account (or on the tablet).
- There is **no chat, no contact with other players and no adverts** in this game.
- Only game progress is kept. You can delete a player and everything about them at any time.

Two ways to play

	Online (vistr.memoryq.com/missing) - available now	On the tablet or computer (offline) - coming next
Internet	Needed	Not needed after installing
Pictures	The full, growing library	A built-in set
Players	Under your Memoryq account, on any device	Several on one device (good for a classroom)
Progress	Kept online; reports to print and share	Kept on the device

To start: sign in at **memoryq.com** (a free account), open **Spot What's Missing** in the menu, add a player, then press **Play now**.

Questions carers ask

My child taps everywhere. Is that a problem?

No - wrong taps cost nothing. Try level 1 with hints on, and show them the full picture first. Tapping randomly usually turns into looking within a few sessions.

My child gets upset when stuck.

Set hints to appear sooner and keep sessions short. Pressing Next is always fine - the answers are shown kindly before the next picture.

Can we use our own photos?

Not in the first version. It is on the list of ideas for later.

Who do I ask for help?

Write to **support@memoryq.com**.
